improving lives

Our Commitment

We specialise in resolving complex moving and handling challenges.

With over three decades of experience, we have pioneered cutting-edge healthcare solutions, dedicated to enhancing the quality of life for individuals with diverse physical abilities.

For users whom are often some of the most vulnerable, mobility impaired members of our communities, the moving & handling products, services and support we provide are life changing!

At the heart of our company lies the relentless pursuit of *Improving Lives*. We achieve this through world-class joint assessments, an exceptional array of quality products and services, and our unwavering dedication to effecting positive change in people's lives.

Products in our portfolio foster independence and enhance the well-being of individuals who face mobility challenges, including the elderly, the infirm, and their caregivers and families

Our company values define us and drive us forward in our mission. "Improving Lives," are two powerful words succinctly encapsulate why we do what do.

We firmly believe that true healthcare excellence stems from a comprehensive understanding and unwavering support for the needs of all stakeholders impacted by our products. This includes users, clinicians, caregivers, families, support workers, technicians, and ourselves. To ensure we consistently deliver on this promise, we hold ourselves accountable to specific values that govern our daily operations. Each day, we embark on our journey with a steadfast dedication to living out these values.

Our journey to this point has been supported by implementing the Entrepreneurial Operating System (EOS), a framework which allows us to achieve a high degree of focus and traction on the things that make most difference to us and our customers.

We are repeatedly the preferred supplier of choice for healthcare professionals and institutions.

INVESTING IN PEOPLE

We regularly receive customer feedback that our staff are some of the best individuals in the industry - and we couldn't agree more!

We recruit, recognise, and mentor individuals based not only on their proven skillset, expertise and experience but also on their alignment with our values. Through various initiatives, we continually nurture our employees own self-growth and personal well-being.

We firmly believe that by prioritising our employees' welfare across their professional and personal lives, they are enriched and further empowered to deliver exceptional service to our customers. This investment in people is reflected in our remarkably low turnover and long-standing tenure of staff as well as in long-standing and first-rate customer relations.

SUSTAINABILITY & ETHICS

As a business, Care & Independence are conscious of the impact manufacture and supply has upon the environment. We have already taken steps to reduce our carbon footprint and continue to seek further ways to improve sustainability and minimise environment issues.

Equally, each of our own suppliers are carefully chosen based upon their own business credentials and ethics alongside the quality and performance of the materials they supply.

Examples of the measures we have taken:

- Sling waste fabric is recycled
- Recycling bins across all of our offices and sites
- A no-print-unless-necessary office policy
- Fleet vehicles are diesel-run which is more sustainable fuel
- Working from home where possible and online meetings when appropriate to reduce fuel consumption
- Water-powered electrics for some manufacturing processes
- Configurable bathing products reducing need for additional stock manufacture

Furthermore we are proud to be a member of one of the world's leading ethical trade membership organisations Sedex (Supplier Ethical Data Exchange) to ensure sustainable and responsible business practices internationally.

Manufacture & Supply

Market leaders in innovation

We have always been propelled by a steadfast commitment to serving the end user, who relies on our products to enhance their quality of life and foster greater independence.

Through rigorous research and collaboration with esteemed clinical experts, we delve deeply into understanding the intricacies of the user's needs and daily experiences. This approach has enabled Care & Independence to spearhead performance and quality within the market, resulting in patented innovations that prioritise both design and comfort.

RESEARCH & DEVELOPMENT

Before any Care & Independence product reaches the market, it undergoes a rigorous research and development process.

This process originates through diligent market analysis and gathering voice of both customer and business. Our in-house team then crafts initial designs, carefully considering factors such as material quality, comfort, practicality, cost-effectiveness, and overall feasibility.

Once the prototype is ready, we engage in further field research and practical trials, actively incorporating feedback from real-world scenarios into the final design.

To ensure utmost durability and longevity, products are subjected to extensive, hard-use simulated test conditions that surpass 'normal' usage standards. Only when we are confident in the product's performance and durability do we deem it ready for production and release into the public domain.

SUPPLY CHAIN SECURITY

Care & Independence proudly operates as a British manufacturer, with two production facilities strategically located within the UK. By partnering with Tier-1 supply-chain providers based in the UK, we can mitigate the risk of supply disruptions often faced by importers.

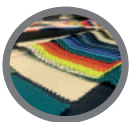

Employing a multi-vendor sourcing strategy further enhances our resilience against interruptions in material supply. Moreover, our diverse logistics capabilities, including consignment stocking and flexible call-off options, offer additional safeguards to ensure a seamless and reliable supply chain for our customers.

FABRIC & MATERIALS

At Care & Independence, we pride ourselves on manufacturing products using a diverse range of quality fabrics and materials. Each component is meticulously chosen to maximize performance and ensure an extended product lifespan. Our manufacturing process takes into account various factors such as fabric compatibility, precise stitching details, welding techniques, and other subtle intricacies that contribute to the overall quality of our products.

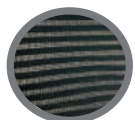

Moreover, our team of skilled machinists and production staff plays a pivotal role in upholding the exceptional quality standards for which we are renowned. Their expertise and dedication are reflected in every product we create.

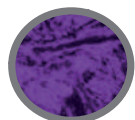

A variety of materials are used for sling construction: Soft-knit Polyester is strong, soft and durable. Parachute silk is ultrafine yet incredibly strong while 3D-Spacer moulds to body shape for extra comfort and support.

High grade slidesheet fabric is applied to key areas to assist with sling fitting and help reduce tissue viability risks.

Breathable fabrics allow air circulation aiding temperature control, being especially important for In-Chair slings.

Non-slip fabrics such as the luxurious one-way velvet velour is used for additional security benefits.

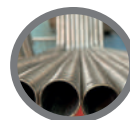

Laser-cutting technology is employed as standard, allowing precision cutting and clean lines for slings.

In bathing-related situations, it's important to have fast draining and quick drying materials that are also kind the skin, which is why we don't use mesh fabric in any of our products.

Latex-free vinyl used in our BATHING RANGE is soft to the touch, hard-wearing, hygienic and protective against harmful bacteria.

Stainless steel used as framework for bathing products is robust, rust-resistant and can be further powder-coated.

ASSURED QUALITY STANDARDS

Underscoring our commitment to maintaining the highest quality standards are numerous accreditations.

Delivering products and services that consistently meet or exceed expectations provide peace of mind to our customers.

Moving & Handling Product Specialists

Adept at solving complex needs

All of our customer-facing team have extensive experience solving complex moving and handling issues. With backgrounds spanning various healthcare sectors and multiple years of real-world situational exposure, our Product Specialist Team apply that practical knowledge to ensure the best and most appropriate solution is found on an individual user basis.

In addition to being Product Specialists across our brands, our entire sales force is trained to Level 4 (Train -The-Trainer) in *Manual Handling and Risk Assessment in People Handling*, accredited by ROSPA. People who work with us and use our products can therefore be assured of best practice and care at all times.

Our product portfolio comprises diverse solutions suitable for a wide range of scenarios. Each product range offers a wide selection of products that address everyday and complex moving and handling needs.

Our Product Specialists and Business Development Team work closely with healthcare professionals across all streams of the healthcare industry. We work with you for the greater good of the end user to do whatever we can to help improve the lives of those in your care.

Introducing the Glove Sling®

Slings that fit like a glove!

When we introduced the first GLOVE SLING® product to the market over 15 years ago, it was hailed as game-changer due to its innovative design and high performance. Ever since, our GLOVE SLING® range has continued to grow in popularity and number.

Renowned throughout the industry for our high quality of manufacture and ability to create bespoke tailor-made slings known as 'Specials', today, with all the optional variations, sling styles, sizing and fabric finishes available, our GLOVE SLING® portfolio reaches into the hundreds.

THE DIAMOND FAMILY

The pinnacle of sling innovation at its very finest. Multiple design elements such as the patented diamond-shaped aperture and patented binding-free leg sections elevate user comfort and sling performance to previously unprecedented levels in sling quality and design.

THE DELUXE FAMILY

A wide choice of slings with all-round purpose making them a great choice for those with multiple needs.

Exceptional high quality and performance...Unrivalled for fit and comfort...The GLOVE SLING® range is consistently a preferred choice for healthcare professionals.

THE IN-CHAIR FAMILY

Comprising divided-leg and hammock styles, these slings are made using superior breathable fabric technology. Strong and comfortable, users benefit from excellent air permeability reducing over-heating and helping minimise tissue viability risks normally associated with in-chair use.

THE TOILETING FAMILY

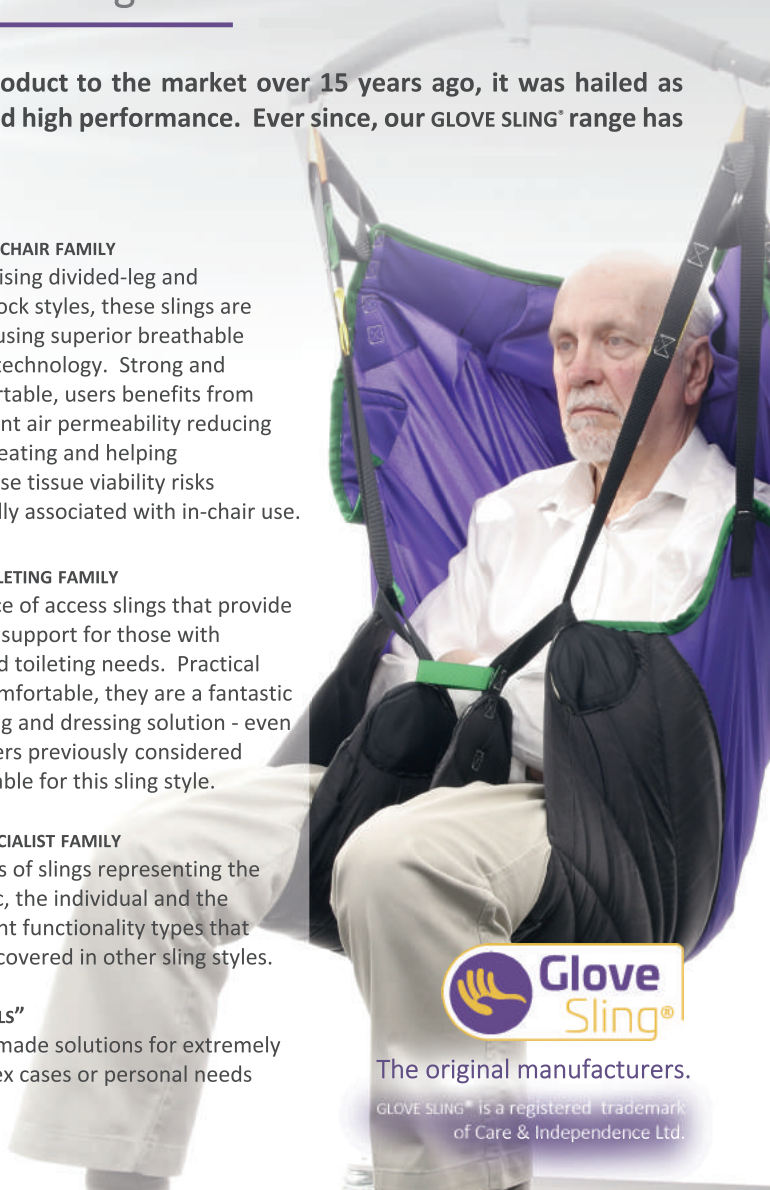

A choice of access slings that provide secure support for those with assisted toileting needs. Practical and comfortable, they are a fantastic toileting and dressing solution - even for users previously considered unsuitable for this sling style.

THE SPECIALIST FAMILY

A series of slings representing the specific, the individual and the different functionality types that aren't covered in other sling styles.

"SPECIALS"

Tailor-made solutions for extremely complex cases or personal needs

CHOOSING THE RIGHT SLING

This chart provides a simple assessment process and is a basic guide towards an optimum result and not a guarantee of suitability.

There may be additional patient needs and transfer task aspects to consider that may influence the requirement too, thus a clinical professional may deem it safe to compromise on one aspect to meet another. With risk assessment it may be determined that a sling other than the ones detailed here may be more appropriate.

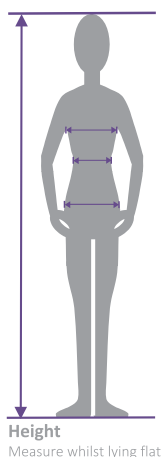

A Care & Independence Product Specialist is available to provide assistance and advice free of charge.

Because leaving a sling with a toilet aperture in place in a wheelchair can increase tissue viability risk, this chart has two starting points

SLING SIZE GUIDE

The phrase 'fits like a glove' is apt for our GLOVE SLING® products as we use a scientific anthropometric sizing system based on universal body ratios - meaning there is no more guess work for the right fit! Simply measure the user height and girth and read from the table to find the right fit first time every time.

Glove Sling® STANDARD	Height cm	Girth cm	SWL* Kg	Size	Binding Colour
Paediatric Unisex	75-95	45-55	230	1	White
	95-110	50-60	230	2	Red
	110-130	55-70	230	3	Yellow
	130-150	65-80	230	4	Orange
Adult Unisex	135-160	70-85	230	5	White
	145-170	75-90	230	6	Red
	155-180	85-100	230	7	Yellow
	160-190	95-115	230	8	Green
	160-190	105-130	230	9	Black
	160-190	125-150	275	10	White
	160-190	145-175	350	11	Red
	160-190	170-200	350	12	Yellow

FOXY STYLE

If a user's girth doesn't co-align with the height column in the standard chart, a Foxy-style sling may offer a better fit.

People with broad hips and larger thighs often find leg supports aren't long enough to comfortably go around their hips and between their thighs. Longer lengths and wider leg sections of the Foxy-design specifically address this issue.

Glove Sling® FOXY-STYLE	Height cm	Girth cm	SWL* Kg	Size	Binding Colour
Adult Unisex	130-155	85-100	230	5	White
	135-160	95-110	230	6	Red
	140-165	105-125	230	7	Yellow
	140-165	120-140	230	8	Green
	140-165	135-155	230	9	Black
	140-165	150-175	275	10	White
	140-165	170-200	350	11	Red

PRESSURE MAPPING

Pressure Mapping is a specialised measurement technology used to visualise the contact pressure distribution between the human body and a supporting surface and equipment interface, e.g. chair or sling. This is especially important for In-Chair style slings where the user remains in a seated position for longer than usual.

Independent pressure mapping trials commissioned by Care & Independence have identified areas of common risk. In turn, this has enabled us to develop sling solutions which vastly improve areas of tissue viability risk, pain and other health concerns to the equipment user.

This is also why Care & Independence In-Chair sling designs don't have an aperture, as apertures have been scientifically proven as detrimental to a seated In-Chair sling user.

Other user benefits as a direct result of our research include:

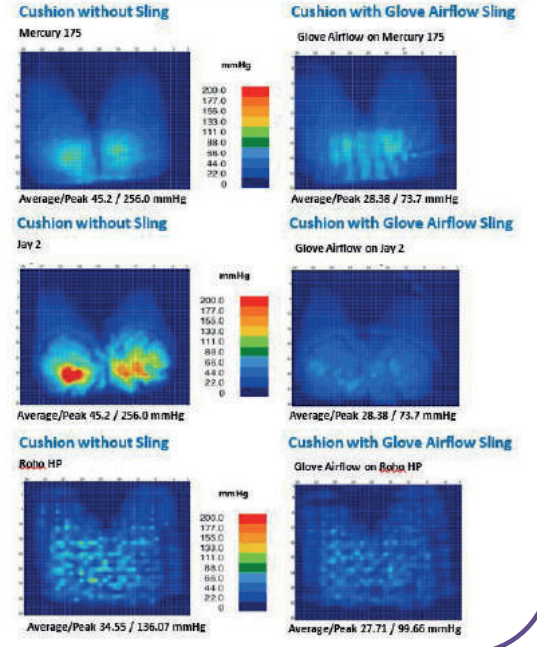

- Extra padding added to identified key-risk areas
- Improved temperature regulation
- Risk reduction to soft tissue damage
- Greater comfort via our patented seam-free leg sections

Pressure mapping results available on request

GLOVE AIRFLOW™ RESULTS

As is clearly evidenced in the results below, the GLOVE AIRFLOW™ used in conjunction with pressure cushions actually outperforms the pressure relief obtained from a pressure cushion without a sling!

Introducing the **Bathing** Range

A modern choice for users & carers

When it comes to bathroom solutions, Care & Independence has an extensive range of shower chairs, cradles, bathing and changing solutions. With a large variety of options in sizing, seating finishes, and functionality, there's something to suit virtually every user requirement. Additionally, our bespoke 'Specials' service allows for customised solutions to address specific needs and preferences.

Our renewed BATHING RANGE product designs are devised using voice of customer and clinician input. With a host of features and benefits ideal for wet environments, such as excellent drainage and fast drying times, the BATHING RANGE is a modern choice for users and carers.

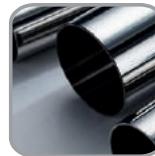

USER COMFORT

Spacer fabric is kinder to the skin than mesh material and highly supportive as the 3D-weave moulds to the body. Adjustable fixing straps allow individual tension correction.

FOCUSED ON HYGIENE

Clunk-click buckles on head, back and calf supports give carers quick and easy removal of supports for laundering, helping improving hygiene and injection control.

DURABLE FRAMEWORK

Strong and robust with a choice of two frame finishes in either satin-polished stainless steel or with Anthracite Grey powder coating.

COMPATIBILITY

Some of our shower chairs are also compatible with the leading manufacturers of wash and dry toilets so you can be further assured of a great bathing solution making the best of both worlds.

Introducing BURNETT ReMould®

Remouldable posture support as unique as you are

For decades the BURNETT REMOULD® range of re-mouldable products has been a leading posture care solution and is now exclusively manufactured by Care & Independence. The BURNETT REMOULD® range delivers a diverse selection of vacuum-moulded/self-regulating postural supports, providing relief for multiple medical conditions across various environments and applications.

BENEFITS

- Cheaper than bespoke solutions
- Moulds to personal body contours
- Adaptable as needs change
- Protects against hard surfaces
- Provides comfort and support

APPLICATIONS

Anyone can use BURNETT REMOULD® products but they are especially suitable for those with:

- Postural needs
- Changing needs
- Therapy needs

CLINICAL USES

- Helps balance pelvic obliquity
- Aids stabilisation of body
- Promotes body symmetries or support asymmetries
- Supports postural correction
- Suitable for therapy as well as everyday use
- Suitable for use with over 30 medical conditions*

INGENIOUS SIMPLICITY - HOW IT WORKS

Designed for people who need additional postural support, BURNETT REMOULD® products are easily shaped to a specific users anatomical body contours, helping provide a unique stability and comfort across a wide range of settings.

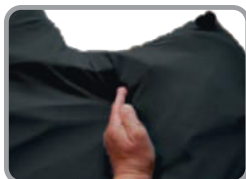

With the ability to re-mould shapes and thickness of the support, these products can provide an ongoing relief and support system as user needs change over time and, in the case of infants and paediatrics, with natural growth spurts.

BURNETT REMOULD® products comprise of a durable and watertight outer vinyl casing that houses thousands of soft beads*. Much like a beanbag, the concept involves the precise manipulation of the beads around exacting body contours, giving a moulded support as unique as the individual user.

Products are categorised into two types:

1. VACUUM-MOULDED

All vacuum-moulded products work by using a pump to extract air from the product casing. This causes the support casing to become semi-firmed, allowing the thousands of internal beads to be manipulated into a bespoke shape for the user. Once the desired shape is moulded, further air extraction compacts the moulding into a set shape. It is only with the reintroduction of air via the product valve that the product casing will return to a malleable state ready for re-moulding.

Air is vacuumed out allowing bead positioning to be manipulated by hand and set into a bespoke moulded support.

2. SELF-REGULATING

With self-regulating products, no pump is required. Instead as weight is applied to the product, air is naturally expelled into a hollow chamber flap at the extremity of the product casing, allowing the beads to mould into a supportive shape according to the weight distribution. As the product warms up e.g through body heat transfer or bath water, so the product becomes more pliable. When weight is alleviated, the air returns to the main casing and the moulding disperses, ready for re-use.

Air disperses into an excess fabric channel via a small gap, allowing the beads to mould into a supportive shape.

Uniquely mouldable to individual body contours time and

The majority of BURNETT REMOULD® products are vacuum-moulded and can be repeatedly remoulded using either a foot or hand pump (both supplied with connector attachment).

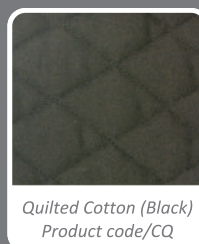

*Foot pump (BS1179)
Extended length hose (BS1177).*

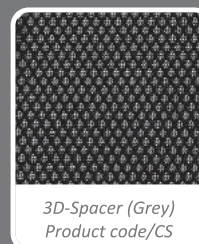

*Hand pump (BS1178)
Recommended for smaller supports*

BURNETT REMOULD products* are also available with a corresponding cover** for additional comfort during use.
